# Title: Hello

Problem Statement:

Welcome to CS2040! Here's a simple question to get yourself warmed up.

Given a string s, we want to count the number of occurrences of "Hello" and "World" (case sensitive). There may be other random words mixed in as well.

Print the number of occurrences of "Hello" minus the number of occurrences of "World".

Input:

A string s, in a single line. s contains 1-100 words, each word has length of at most 10 characters.

Output:

An integer, the number of occurrences of "Hello" minus the number of occurrences of "World".

Examples:

Sample Input 1:

```
Hello Hello Hello fish World
```

Sample Output 1:

```
2
```

Sample Input 2:

```
hello hello world
```

Sample Output2:

```
0
```

Sample Input 3:

```
Hello Hello World
```

Sample Output 3:

```
1
```
